Other Site Characteristics

Zona di fondovalle comprendente il torrente Entella e i suoi affluenti, comprendente anse e parte di pianie alluvionali. Affiorano terreni appartenenti all'unità del Gottero (rocce sedimentarie torbiditiche) e terreni alluvionali costituiti da ghiaie e sabbie debolmente argillose.

4.2 Quality and importance

L'importanza del sito è prevalentemente ornitologica: sono presenti numerose specie di grande interesse comunitario e l'area rappresenta uno dei più importanti siti ornitologici per la Liguria). Benchè il tratto terminale del corso d'acqua si trovi in ambiente urbano, il sito è comunque suscettibile di interventi naturalistici di restauro ambientale che aumenterebbe ulteriormente il livello di biodiversità. Si rileva che in ogni caso nel sito sono presenti, oltre ad una specie prioritaria per la 92/43, numerose specie dell'allegato II, endemiti di rilievo e altre specie protette da direttive (convenzioni internazionali). Si rileva infine che il sito ospita una popolazione di *Astigis salzmanni*, specie rara, tipica riparia, che è stata proposta dalla Regione Liguria per l'inserimento nell'allegato II della 92/43.

4.3 Threats, pressures and activities with impacts on the site
